EXPERIENCE

Trumpia

Anaheim, CA

Junior Software Developer

September 2017 - Present

- Apply clean code practices to develop readable, maintainable and scalable code.
- Engage in autonomous Agile development with a 5-man team with little external guidance.
- Interface with clients to architect and develop custom applications.
- Implemented initial internal reporting software to improve productivity in several departments.
- Increased productivity within several departments by automating the delivery of client reports utilizing Trumpia's internal database and Google Drive's API for file management.
- Developed a contact sync architecture to automate data sync between Trumpia's SaaS, utilizing FTP, third party API's and Trumpia's API.
- Designed and implemented a real time application that retrieves the nearest food bank locations using a Min Heap. Tech stack included MongoDB, Google Directions API, and Trumpia's API.

EDUCATION

California State University, Fullerton

Fullerton, CA

Bachelor of Science, Computer Science

August 2019

PROJECTS

Travel Planner

- Implemented the Best-First search algorithm to return a suggested travel plan based on user input. Tech stack (Python, and Google Directions API)

Online Sign up Page

- Created an online sign up page using Trumpia's API for contact management in Flask. Deployed on AWS Elastic Beanstalk.
