EXPERIENCE 💼

ENTRY LEVEL SOFTWARE DEVELOPER
Trumpia
2018 - Present   Anaheim, CA

Trumpia is a SaaS company that specializes in the SMS industry as channel for communication.

- Designed, architected and wrote a Django based web application for new Trumpia account sign ups. Created with Trumpia's Rest API and stored data on MongoDB
- Implemented back-end features of an application that retrieves nearest locations using Google directions API and a Min Heap
- Apply clean code practices to architect maintainable, reusable and scalable code
- Independently created and developed an automated reporting application using python, and SQL to improve productivity in several departments
- Built a data sync architecture to automate the process between Trumpia's SaaS using third party API's and FTP
- Integrate with third-party services and external APIs to create custom applications

API SUPPORT SPECIALIST
Trumpia
2016 - 2018   Anaheim, CA

- Use my communication and technical skills to interface with clients to define the structure and components for projects
- Helped clients troubleshoot Trumpia's Rest API
- Analyzed customer use case to provide work flows, integration ideas, and additional use of the software

EDUCATION 🎓
